

## Heart health in pregnancy study needs your help!

[AIMS Journal, 2026, Vol 38, No 1](#)

Rebecca Jarman wrote for the AIMS journal in 2024 about [Peripartum Cardiomyopathy](#) (PPCM), a rare but potentially life-threatening disease of the heart muscle presenting uniquely during the last few weeks of pregnancy or the months following birth. Rebecca is a member of the [NIHR-BHF Cardiovascular Partnership Maternal Cardiovascular Health](#) theme working group and part of a research team being led by [Dr Paz Taya](#) and [Dr Antonio de Marvao](#) who have developed PREG-HEART. The research team is looking for participants for their study.

*A request from Rebecca Jarman*

PREG-HEART is the first UK-wide, direct-to-patient, online research study dedicated to heart health in pregnancy.

### Here's a bit of info about PREG-HEART:

The number of pregnant women with heart disease is rising, but there are very few research studies looking specifically at maternal heart health.

We want to understand how heart health affects women during and after pregnancy, to improve care and health outcomes for many women in the future, and we need your help!

We are looking for women living in the UK who are:

- Currently pregnant or have been pregnant in the past, and were diagnosed with heart disease before, during, or up to 6 months post-pregnancy;
- Currently pregnant and do not have heart disease.

**What will participants need to do?**

1. Register on the website [PREG-HEART | HeartHive](https://preg-heart.org.uk)
2. Sign an online consent form
3. Fill in a short health survey each year, for as long as they wish to take part

# Help improve maternal heart health

## Join the PREG-HEART study

The number of pregnant women with heart disease is rising.

We want to understand how heart health affects women during and after pregnancy, to help improve future care.

**What you'll need to do:**

**STEP 1.**  
Sign an online consent form

**STEP 2.**  
Fill out a short health survey each year, for as long as you wish to take part

**Who can take part?**

- Women diagnosed with heart disease before, during, or up to 6 months post-pregnancy
- Pregnant women without heart disease

**Find out more at [thehearthive.org/preg-heart](https://thehearthive.org/preg-heart)**

[thehearthive.org](https://thehearthive.org)

The PREG-HEART study launched officially on 10th February 2026 for a 6 month pilot phase. If this proves successful the plan is to secure further funding to continue the study long term. This is a direct-to-patient study and Rebecca needs to ensure that the target population (those who are currently pregnant

or who have previously been pregnant and experienced heart disease) are aware of it and have the opportunity to sign up. Please spread the word.

If you think you may be interested in taking part, please register your interest here: [PREG-HEART | HeartHive](#)
